TBC-CAPLOC and *CAPLOC Plus* are incredibly versatile standing seam panels suitable for a wide range of applications. Using a separate concealed clip allows for thermal expansion contractions while maintaining its weather resistance down to 3:12 slopes. *TBC-CAPLOC* is ideal for raked roof applications where just the seam cap or both the cap and pan can be curved on site. *CAPLOC Plus* offers additional seam height to ensure increased wind & water protection.

TBC-CAPLOC is manufactured using high-grade G-90 galvanized or Galvalume® steel with a Kynar 500® / Hylar 5000® coating offering the best protection available in the industry, backed up with a 30 year non-prorated finish warranty. Factory fabricated continuous lengths up to 60' are available. Optional on site fabrication of the pan allows for lengths up to 150'.

Hylar 5000® is a registered trademark of Ausimont USA, Inc.
